

كورس سفير التفوق 2025

English Passages Booklet

لتأهيل الراغبين بالالتحاق بمدرسة المتفوقين بعين شمس

و مدارس المتفوقين للعلوم و التكنولوجيا STEM ومدرسة الضبعة النووية

عزيزي الطالب / عزيزتي الطالبة :

Safir el Tafawok
We create Bright minds

تتضمن هذه الاسئلة أسئلة متعددة الأفكار , قد تجد بعضها سهلا و البعض الآخر صعبا , حاول الإجابة علي جميع الأسئلة .

Section One : Reading Comprehension

A- Read the following passage, then choose the correct answer from a, b, or d:

Earthquakes may take place anywhere on the Earth's surface. However, they are most likely to occur in certain regions. Earthquake regions are usually near mountains, volcanoes or under the sea. **outside these areas earthquakes are generally weak.**

During an earthquake, the surface of the earth moves up and down like a train roaring over a bridge or through a tunnel. The shock is produced by pressure waves which travel through the rock. These waves are usually the result of movement of large masses of rock below the surface of the earth.

These pressure waves may travel at a maximum speed of 650km/s. The duration of earthquakes varies: an earthquake may have a duration of a second or it may continue at intervals for days. The force of an earthquake can be measured by means of special instruments. There is also a scale of measurement based on the effects of earthquakes. This scale ranges from earthquakes which are too weak to be observed by man to those which are capable of destroying everything made by man. The man himself can spare his life if he left the buildings hurriedly.

Some of the bad effects of earthquakes can be avoided by making special buildings. In one kind of structure, the parts are made of light flexible materials and woven together, like a basket. This enables the building to move without breaking. The other kind is like a box in structure. It is made of heavy rigid materials. The lower part of the building must have a much greater mass than the upper part.

1-The main idea of the passage is.....

- earthquakes tend to occur under the sea
- what happens during and after earthquakes
- what intervals of earthquakes movement
- the earthquakes periods of time

2-Constant prediction of earthquakes movement.....

- acts the week pressure waves happening under sea
- shows that the earthquakes movement scales are just zero
- makes the predictable loss of man's possessions less
- is a result of the earthquakes constant observation

3-The structure is made of heavy Materials.

- mrif
- mirf
- frim
- firm

4- Which of the following titles can be a summary of the third paragraph?

- The measurements of earthquakes
- The structure of earthquakes
- Earthquakes surface area
- Earthquakes destructive effects

5- Which of the following is NOT stated in the passage?

- Four things about earthquakes can be measured.
- The effect of extremely bad earthquakes.
- The possibility of moving our buildings.
- Region's names where there may be no earthquakes.

6- It can be inferred from the passage that

- man stays at home during earthquakes
- mountaineers always risk their lives
- man prevents earthquakes to occur
- yachts- living people always live safely

7- To decrease the pressure waves accumulating in the rock for years, we can.....

- fill the cracks in the rocks with cold water to be wider and then pieces of rock breakaway.
- prevent people from living in or going to the areas where there may be earthquakes to occur.
- use atomic bombs to destroy or break the big rocks into small pieces or change them into dust.
- dive and stop the waves by force or make them fight other waves of larger masses of rocks.

8- The correct punctuation of the underlined sentence “outside these areas earthquakes are generally weak” is

- Outside these areas. Earthquakes are generally weak.
- Outside these areas, Earthquakes are generally weak.
- Outside these areas, earthquakes are generally weak.
- outside these areas, earthquakes are generally weak.

B- Read the following passage, then choose the correct answer from a, b, or d:

A hot water system consists of a boiler and tanks for storing water. Other parts include taps and a thermostat, which is fitted on the boiler. The system may also include radiators.

The boiler is situated at the bottom of the system. It serves to heat the water. Heating the water causes it to rise. When the hot water tap is turned on, water comes from the top of the hot water cylinder. Simultaneously, cold water flows into the cylinder from the cold-water tank.

The flow of water into the cold-water tank is controlled by means of a ball valve. The valve is connected by a bar to a ball-shaped metal float. This floats because it is hollow. As the tank is filled with water, the ball rises and the valve closes. The cold-water tank is situated above the hot water cylinder. Cold water flows out of the tank as a result of gravity.

The function of the thermostat is to control the temperature of the water, this ensures that the water is warm enough, but prevents it from becoming too hot. The water has a constant temperature of approximately 60 °C. The heater is switched on when the temperature falls down below the required level and the cooler is activated when the temperature rises above the required level.

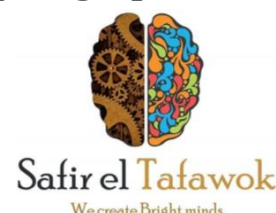

A radiator is usually rectangular in cross section, with wide flat sides. This shape gives it a large surface area in proportion to its volume consequently it gives out more heat.

1-The main idea of the passage is

- components of the boiler and the water tank
- processes of storing and heating of water
- floating the hot water cylinder float
- structure and function of the hot water system

2- Which of the following is the correct summary for the last paragraph?

- The radiator has certain properties.
- The radiator gives out more heat.
- The radiator has large volume.
- The radiator has a rectangular shape

3- According to the passage, it can be inferred that

- the hot water cylinder gives out less heat
- the water tank bar is not solid
- geometric shapes freeze water
- heating and cooling water are not done mechanically

Safir el Tafawok
We create Bright minds

4- In case of situating the hot water cylinder above the cold water tank,

- there would not be hot water flowing into the tank
- the ball-float can help make passages of cold water
- there would not be cold water flowing into the cylinder
- the thermostat can play the role of both cylinder and radiators

5- Which one of the following the author did not tell us where it is in the hot water system?

- radiator
- boiler
- thermostat
- valve

6- On having a hot water shower, water became cold. This happened because.....

- the heater radiator stopped working
- the ball-float became solid
- the heater thermostat stopped working
- the tank valve is closed

Safir el Tafawok
We create Bright minds

7 -The operation of the water tank with water is easy.

- illifing
- lilfing
- fliling
- filling

8- The correct punctuation of the underlined sentence “consequently it gives out more heart” is

- Consequently It gives out more heart.
- Consequently, it gives out more heart.
- Consequently. It gives out more heart.
- Consequently it gives out more heart

Safir el Tafawok

C- Read the following passage, then choose the correct answer from a, b, or d:

Oil is usually found in porous rock under a layer of impermeable rock which prevents it from escaping. It can then only be reached by drilling. The initial gushing of oil out of a drill pipe is caused by the pressure of the gas trapped and compressed instantly above the oil deposits.

In time, this pressure decreases and the oil has to be pumped to the surface. The crude oil raised directly from wells is not yet ready for use. It has to be refined. The first stage in this process is fractional distillation in a fractionating column.

Those fractions such as petrol and kerosene which are lighter and more volatile, move towards the top of the column before condensing. The heavy residual fuel at the base of the column is extremely impure.

But distillation does not produce enough high-grade petrol to meet today's high demand. The petrol offered for sale to motorists is a blend of straight distilled petrol produced by chemical modification from some of the other distillates.

As more and more people own cars, the future looks less and less hopeful. It has been taken 600 million years for the world's oil reserves to be found. It will probably take us only a little over a hundred years to exhaust. The age of the internal combustion engine may turn out to be short and highly uncertain.

1- The best title for this passage is

- Gas compressed under land
- Non distillation of oil
- Coal and oil reserves
- Oil extraction and refinement

2- Which of the following best summarizes the first paragraph?

- Oil is found in porous rock and can only be reached by drilling.
- The pressure of gas causes oil to gush out of a drill pipe.
- Oil is usually trapped under a layer of impermeable rock.
- All of the above

3- Based on the text, what can be inferred about the future of oil reserves?

- They will last for hundreds of years.
- They are likely to be exhausted in a little over a hundred years.
- They are infinite.
- They will last for thousands of years.

Safir el Tafawok

Safir el Tafawok
We create Bright minds

4- What is necessary for the crude oil raised directly from wells to be ready for use?

- It needs to be drilled again.
- It needs to be refined.
- It needs to be pressurized.
- It needs to be stored for a certain period.

5- Which of the following is NOT mentioned in the passage?

- The process of fractional distillation
- The use of oil in the production of petrol
- The dangers of oil drilling
- The future of oil reserves

6- According to the author, what is the outlook for the age of the internal combustion engine?

- It is promising and long-lasting.
- It is short and highly uncertain.
- It is dependent on the availability of oil.
- It is not mentioned in the passage.

7- The word "volatile" in the context of this passage means:

- explosive
- easily evaporated at normal temperatures
- changeable
- having a strong unpleasant smell

8- In the word "impermeable" from the passage, what does the prefix "im-" mean?

- not
- in
- over
- under

9- Identify the correct punctuation for the underlined sentence "But distillation does not produce enough high-grade petrol to meet today's high demand."

- But, distillation does not produce enough high-grade petrol to meet today's high demand.
- But distillation, does not produce enough high-grade petrol to meet today's high demand.
- But distillation does not produce enough high-grade petrol, to meet today's high demand.
- The sentence is correctly punctuated.

D- Read the following passage, then choose the correct answer from a, b, or d:

Raising the crude oil from beneath the sea-bed is a more difficult and dangerous operation than doing that from beneath the dry land. It has to be brought ashore either by pumping it along pipelines or carrying it in tankers. Then, it needs to be refined, using the fractional distillation which results in the production of several useful substances; all of them normally liquids except the gas from the top of the column and the solid residue at the base.

Pure petrol, which vaporized between 30 C and 200 C centigrade, is used (when blended with petrol produced from kerosene and heavy gas oil) as fuel for motor cars. The gas (which boils between -164 C to -20C) has also a use in many households for heating and cooking, kerosene has, of course, become invaluable as fuel consumed by jet planes. It boils between 200 C and 300 C to 430 C, whereas heavy gas oil and fuel oil evaporate within the range 300 C to 430 C. The former is used to produce diesel fuel for lorries, buses, and some cars, and the latter is distilled to produce other fractions. The heavier fractions such as petroleum jelly and paraffin. The former with a boiling point over 350 C is a useful skin lubricant, and the latter with a melting point between 52 C and 57 C is the main component of wax candles. The pitch and tar at the bottom of the column which boil at over 430 C are used to make asphalt.

1- What is the main topic of this passage?

- The dangers of raising crude oil from beneath the sea-bed
- The process of refining crude oil and the uses of its byproducts
- The environmental impact of oil drilling
- The history of oil drilling

Safir el Tafawok
We create Bright minds

2- Which of the following best summarizes the passage?

- Raising crude oil from beneath the sea-bed is a difficult and dangerous operation.
- Crude oil is refined using fractional distillation, resulting in several useful substances.
- Pure petrol is used as fuel for motor cars.
- All of the above

3- Based on the text, what can be inferred about the process of refining crude oil?

- It is a simple process.
- It is a complex process that results in several useful substances.
- It is a dangerous process.
- It is an outdated process.

Safir el Tafawok
We create Bright minds

4- What is necessary for the crude oil raised from beneath the sea-bed to be useful?

- It needs to be pumped along pipelines.
- It needs to be carried in tankers.
- It needs to be refined.
- All of the above

5- Which of the following is NOT mentioned in the passage?

- The process of fractional distillation
- The use of crude oil in the production of petrol
- The environmental impact of oil drilling
- The uses of the byproducts of crude oil

6- According to the author, how does the difficulty of raising crude oil compare between sea-bed and dry land?

- It is more difficult and dangerous from beneath the sea-bed.
- It is easier from beneath the sea-bed.
- There is no difference in difficulty.
- The author does not mention this comparison.

7- Word "invaluable" in the context of this passage means:

- without value
- extremely useful or indispensable
- expensive
- rare

8- In the word "invaluable" from the passage, what does the prefix "in-" mean?

- not
- in
- over
- under

9- Identify the correct punctuation for the underlined sentence

"pure petrol which vaporized between 30 C and 200 C centigrade is used (when blended with petrol produced from kerosene and heavy gas oil) as fuel for motor cars"

- Pure petrol which vaporized between 30 C and 200 C centigrade, is used (when blended with petrol produced from kerosene and heavy gas oil) as fuel for motor cars.
- Pure petrol, which vaporized between 30 C and 200 C centigrade is used (when blended with petrol produced from kerosene and heavy gas oil) as fuel for motor cars.
- Pure petrol, which vaporized between 30 C and 200 C centigrade, is used when blended with petrol produced from kerosene and heavy gas oil as fuel for motor cars.
- Pure petrol, which vaporized between 30 C and 200 C centigrade, is used (when blended with petrol produced from kerosene and heavy gas oil) as fuel for motor cars.

E- Read the following passage, then choose the correct answer from a, b, or d:

Banking and banks are very important. Banks enable people to save money, borrow money and to pay for things with ease and security. People often have to visit the local branch of the bank when they want certain services. As well as the local branches that are in most cities, each bank will also have a head office. This is where all central tasks are performed that let the local branches function. The people that work in the branches will be the bank manager, the person in charge, and various tellers who work behind the bank counter and help the customers. There will also likely be security guards to protect the money, workers and customers. Most customers will just need to see the tellers when they go to the bank if they are paying money into their account as either cash or a check. However, they might need to see the bank manager if they want to open an account or if they have become overdraw, when they have spent more money than there was in the account. Also if they want to borrow money and get a loan the person will need to see the bank manager who will have to approve it.

Banks also offer their customers the more convenient methods of using either a debit card or credit card. These methods are very convenient as you just need to carry a small plastic card to be able to pay for anything. When paying with plastic card you will need to either sign a receipt or enter a PIN number to confirm the purchase and that you are authorized to use the card.

Safir el Tafawok
We create Bright minds

1- Which of the following can be a title for the passage?

- The world economic system
- The benefits of the banks
- Security guards of banks
- Using plastic cards in purchasing

2- Which of the following sentences can summarize the passage?

- Security guards protect the money, and customers.
- E paying is common nowadays.
- Banks make the world easier and safer.
- Banks managers should be chosen carefully.

3- It can be inferred from the passage that using plastic cards is very

- comfortable
- difficult
- confusing
- complicated

Safir el Tafawok
We create Bright minds

4- In your opinion, the paragraph following the last paragraph most likely will discuss the

- history of banks
- debit and credit cards
- money saving in banks
- future of e-paying worldwide

5- Which of the following is NOT related to the passage?

- There are banks all over the world.
- The trade exchange among countries.
- People can use either debit or credit cards in paying.
- Customers may need to see the bank employees.

6- In your opinion, which of the following methods is more convenient when paying for something than using a check?

- Using a plastic card
- Using cash
- There is not a more convenient method
- With an exchange of products

7- who work behind the bank counter helps the customer.

- Letter
- Tleer
- Rellet
- Teller

8-The correctly punctuated form of the following sentence is.....

- Banks enable people to save money borrow money and to pay for things
- Banks enable people to save money, borrow money and to pay for things
- Banks enable people to save money, borrow money and to pay for things.
- Banks enable people to save money borrow money and to pay for things.
